A primer on study pre-registration

While for humans, pre-registration of clinical trials <https://clinicaltrials.gov/> is available since 2000 and required by the International Committee of Medical Journal editors (ICJME) for publication, in veterinary medicine pre-registration of animal studies is just in its infancy.

Currently, there are a number of exiting initiatives to pre-register animal studies:

1. <https://preclinicaltrials.eu/>
2. https://www.animalstudyregistry.org/asr_web/index.action
3. <https://aspredicted.org/>

You might also think of to pre-register other types of studies (i.e. systematic or scoping reviews):

1. <https://www.crd.york.ac.uk/prospero/>
2. <https://osf.io/>
